WB/W6 Series Isolation Valves

Isolation Assembly for Testing & Sampling

- Safety relief valves at well head
 - Pressure Transmitters
 - Gauges
 - Control Valves
 - Pump-seal Water Isolation
- Allows for testing without interruption of process and costly disassembly

FIRESAFE DESIGN

Installing an A-T Controls WB/W6 Series block & bleed valve assembly eliminates the need for isolation on well head pressure relief feed, filter skid pressure relief and dryer skid relief feed lines. This changes the dynamics of pressure relief re-certification!

Eliminating the need for additional maintenance and component removal reduces down-time, and the possibilities of leakage and gasket replacement.

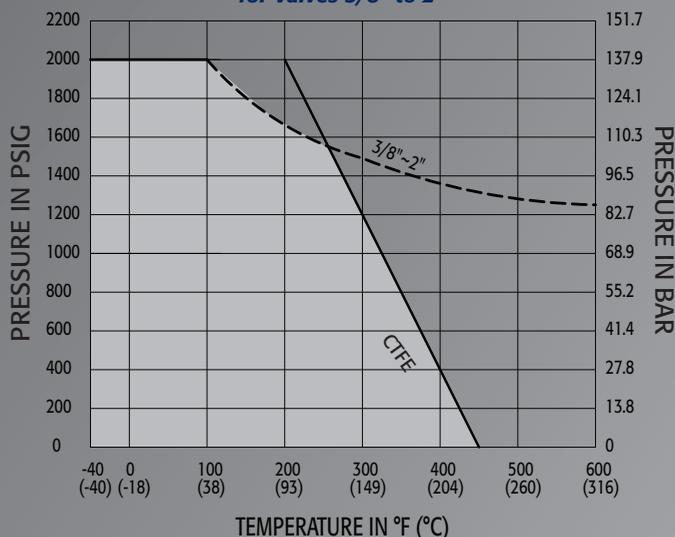

Installation of WB/W6 Series valve on a liquified petroleum loading terminal to isolate relief valve allows for efficient testing without disrupting the process.

This assembly can be used to isolate pressure changes, blow down steam traps, and pressure transmitter isolation as well as seal water on pumps.

NOTE: Dotted line shows the rating for valve body. Solid line shows the rating for valve seat. Both ratings need to be considered when determining the limitation of the valve for specific application.
